

Stakeholder Engagement 2016  
Quality of services round-table meeting - Potential partnerships in favour of  
intermodality

**Title: To promote a strategic territorial coordination plan in order to  
identify crucial intervention points**

**SUBJECT:**

The proposal consists in developing appropriate synergies between all public and private players in the station area in order to intervene on the territory, and to identify and upgrade areas for the logistics of intermodal systems. Within this framework, it is hoped that all the limitations and obstacles given by the different competences exercised by a plurality of public and institutional entities and players in the area of intervention of a station be overcome through coordination. A trial with a Region for integrating and sharing interventions in the station area is planned.

**PURPOSE:**

There is a need for greater coordination and integration among those involved on the territory in a station area.
